Lage, February 2010

Storage conditions and shelf-life times of Altromin diets

Warehousing should always be done at well-ventilated, dark and dry storage rooms with a relative humidity of the air of maximum 65 – 75%.

Standard diets:

Subjecting to below-mentioned terms, Altromin guarantees as follows:

Storage temperature +22°C up to +25°C: Minimum durability of 3 months as from production date

Storage temperature +15°C up to +21°C: Minimum durability of 6 months as from production date

Storage temperature <+10°C: Minimum durability of 9 months as from production date

Special diets:

Special diets, with exception of high-fat diets (crude fat content >10%) as well as diets which contain specifically sensible substances, have to be consumed within 3 months as from production date.

Storing should be done at temperatures lower than +7°C, high-fat diets must be stored frozen (<-18°C).

Please take care for implementation of suitable pest control measurements to avoid intrusion of pests, e.g. insects, rodents etc. Before delivery, the storage room should be cleaned and disinfected. Please pay attention of compliance with FIFO (First-In-First-Out) principles.
